Chapter1 Introduction

This handbook is for all users of the meeting machine, providing reference for the beginners.

The use of manual instructions is as follows:

- ◆ Refer to the contents in the directory to select a particular topic;
- ◆ Use the index to quickly find a term for search;
- ◆ We will give you a brief overview from the first chapter;
- ◆ Abbreviations and terminology are listed in the vocabulary;

Chapter2 Product Overview

The meeting integrated machine is an office system for replacing ordinary whiteboard and projection screen. It is compatible with various applications and remote conferencing software, and you can use it to make demonstrations and annotation together, which makes touch writing, wireless screen transmission, storage sharing integrated and truly meets the needs of business office and exhibition activities, improving the meeting efficiency.

Chapter3 Instructions

3.1 Launcher of Meeting Machine

Default interface

3.1.1 Navigation Bar

Navigation is divided into the left and right navigation. Touch the  suspending in the side of the page (The left navigation bar calls out hint Icon) or  (The right navigation bar calls out hint Icon). Take the left side as an example:

Touch  icon, and the navigation bar is laid out;

Touch , and the navigation bar is retracted;

Touch , and you will return to the previous interface;

Touch , and you will return to home page;

Touch , and you will go into the background and open the task list;

Touch , and you will open the annotation software which is not operable in the whiteboard;

Touch , and you will open the notification panel;

Touch , and you will open the list of signal channels.

3.1.2 Multitask

1. Open the task list: Touch  (Navigation Bar Multitask Icon) to enter background and open the task list.

The operated tasks are arranged based on the sequence of operation, and the lasted used task is arranged at the top.

2. Retract the task list: ①Touch the non-task list area; ②touch ; ③touch 

(Home Page Icon); ④touch  (Return Icon);

3. End single task: Press task thumbnail to left slip or right slip, and the thumbnail is disappeared and the task is ended as you lose the press. You can also touch the upper right corner of each thumbnail  (Close Icon) to close single thumbnail.

3.1.3 Annotation

1. Call out annotation: Touch the  (Annotation Icon) in navigation bar, and the call out is finished when the upside of the middle part of the page shows the word "annotation mode", the toolbar appears below and the navigation bar on both sides is hidden, which is displayed as below:

At this time, only one side of the toolbar is activated. The tool icon in the toolbar on the activation side is highlighted, indicating it is in operable state, and the other side is

dark, indicating that it is not activated.

Note: 1When you touch the Annotation Icon in the left navigation bar to open the annotation, the left side of the pop-up annotation toolbar is activated, and When you touch the Annotation Icon in the left navigation bar to open the annotation, the right side of the pop-up is activated.

2Switch the activation state mode of annotation toolbar: Touch any tool icon on this side toolbar to activate the icons of the entire toolbar.

2. Instructions for icons in the toolbar:

1Quit: Touch  (Quit Icon) to retract annotation bar and quit annotation.

2QR code: Touch  (QR Code Icon) to pop up a QR code generation window, which can be scanned to save the screenshot of annotation content on mobile device.

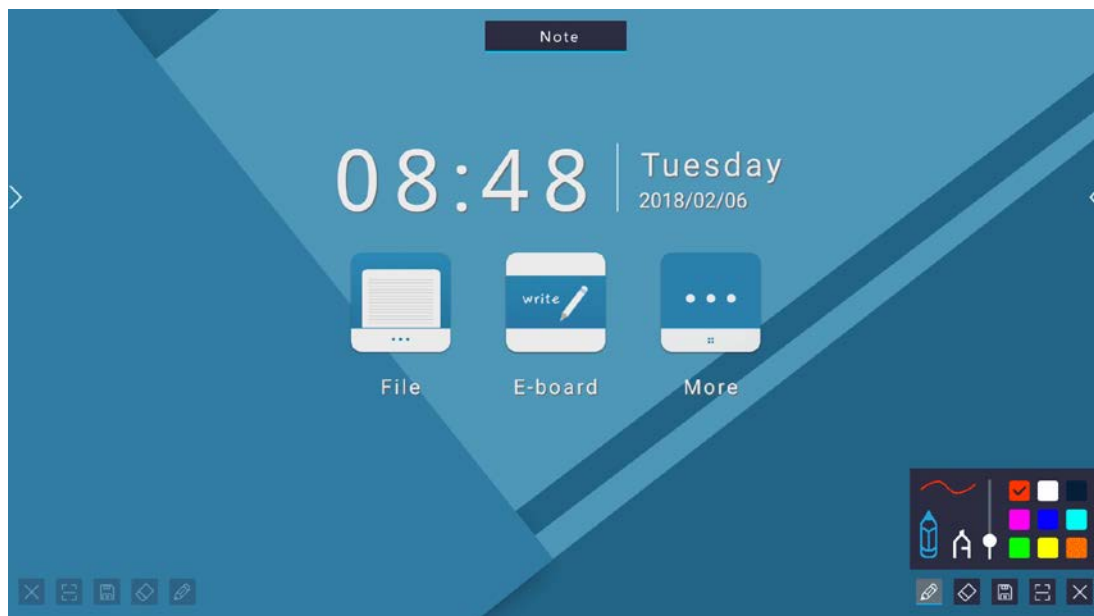

3Save: Touch  (Save Icon) to save the screenshot of the current window.

4Erase: Touch  (Erase Icon) to use erasing function, which can be used to erase annotation.

5Paintbrush: The default stroke is red, and touch  (Paintbrush Icon) to select chirography, color and thickness.

3. Instructions for brush tool:

1Touch  icon to call out brush tool menu , which is shown as follows:

The default paintbrush is pencil, and touch it can switch to marker pen .

2 Modify the thickness of stroke:  Slide it up to make stroke bold, and the handwriting line will be bold simultaneously.

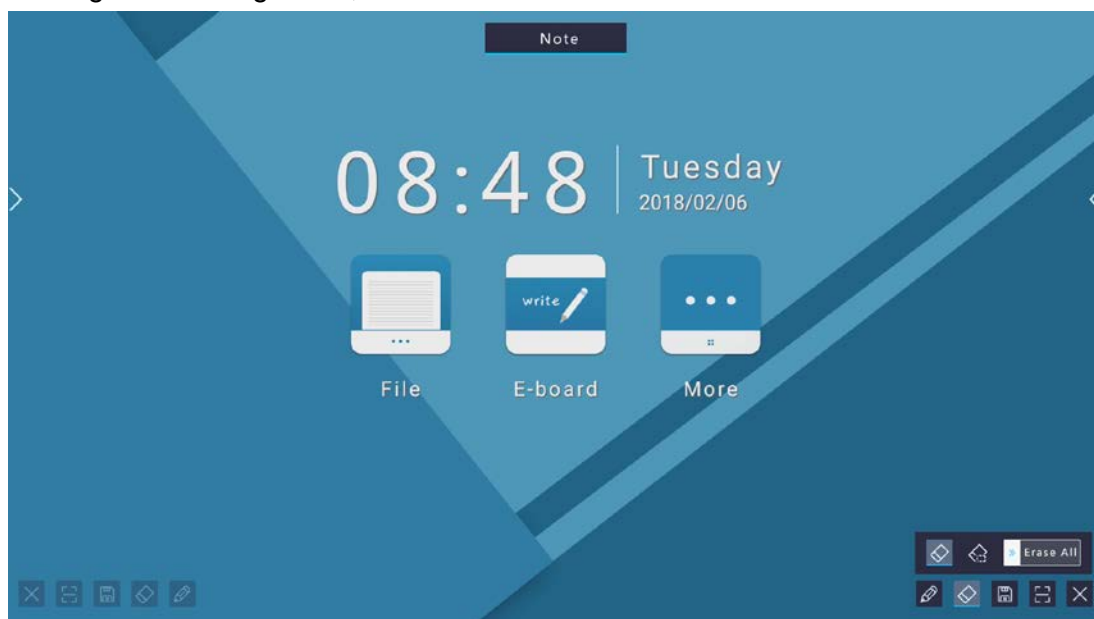

3 Modify the color of the paintbrush: Touch the system preset color plate to change color, for example, from white  to red .

4 Handwriting line:  Display the color and thickness of the current paintbrush.

4. Introduction and instructions for erasing tools:

Introduction of erasing tools: The function of erasing tools is to assist user's blackboard-writing, and there are 4 kinds of erasers: Point Eraser , Circle Eraser , Screen Sliding Eraser  >> Erase All , Gesture Eraser.

Call out erasing tools setting menu: Touch the erasing tools icon  to call out erasing tools setting menu, which is shown as below:

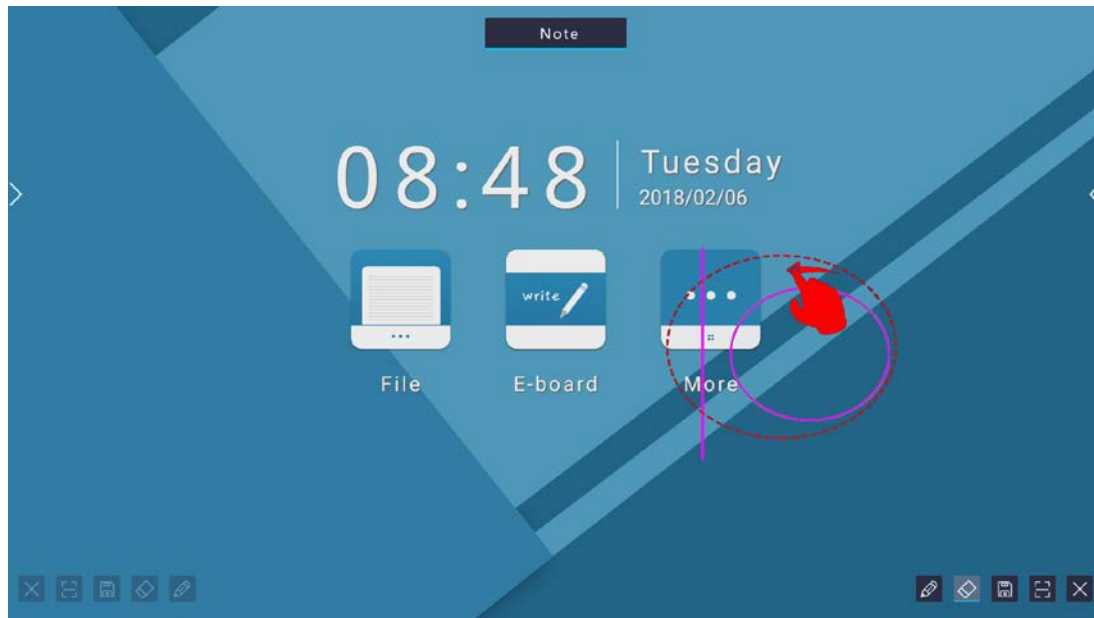

The default erasing tool is the point eraser , and touch it can switch. Except the screen sliding eraser, the system will remember the tools used in the latest opening of the second level menu of erasing tools.

Instructions for 4 kinds of erasers:

1 Point Eraser : The eraser icon  appears when the point eraser is used,

which can only erase the handwriting within the region where it passes by;

2 Circle Eraser : Circle eraser can erase the handwriting within the region where users circle and the parts connecting to the handwriting in the region. When the erasing area is circled or crossed, the handwriting surrounded by color indicates that it is selected, and the finger loosened, it will be erased, which is shown as below:

3 Screen Sliding Eraser: Loose the finger when sliding right above 90% of the progress bar , which will wipe out all contents written in the current screen; when finger is loosed without sliding right to the 90% of the progress bar , the button will automatically rebound and the screen erasing will be canceled; the paintbrush will be returned as the screen erasing is succeeded or canceled.

4 Gesture Eraser: When the touch area of the hand and the screen is more than 6 square centimeters, the erasing icon can be called out , and the gesture eraser is always available, of which the size is changed along with the touch area.

5. Instructions for saving annotation:

Touch  (Save Button) to pop up picture saving window, which is shown as below when there is no external device:

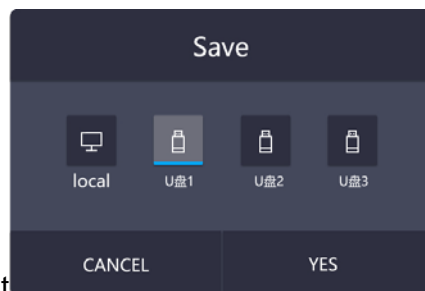

1 When there is external device, the default is to save in external device

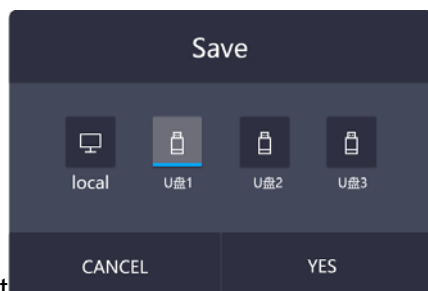

, which can be switched by touch.

2 When there are some external devices, the default is to save in the first device of

external device list, which can be switched by touch.

3 One page shows up to 4 saving locations at

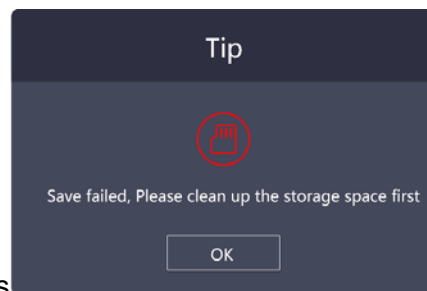

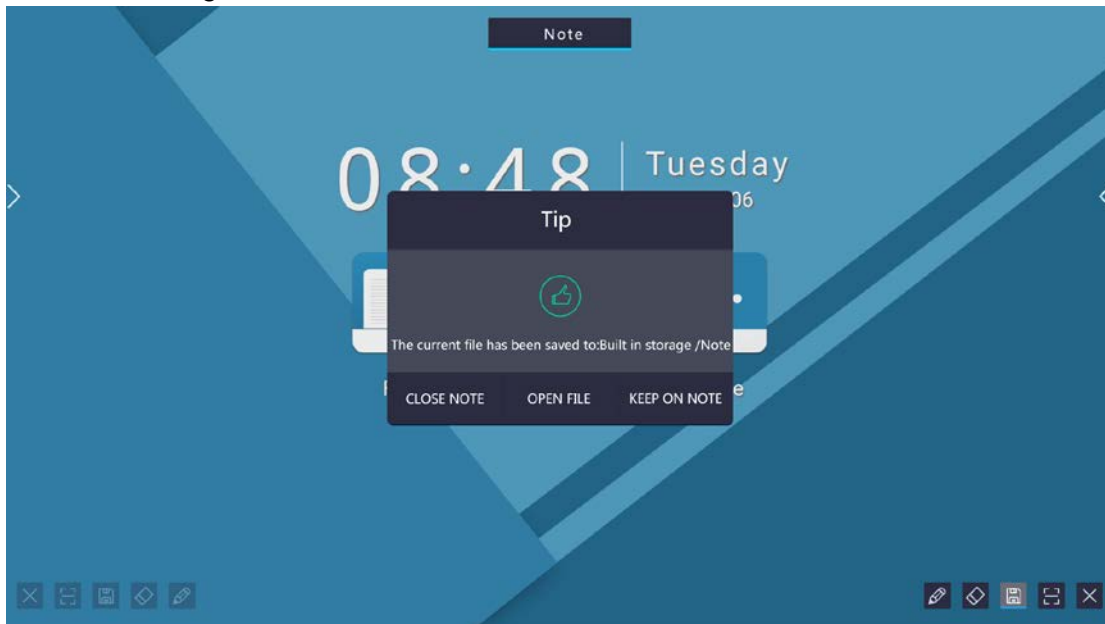

most, and you can turn page by sliding for more than

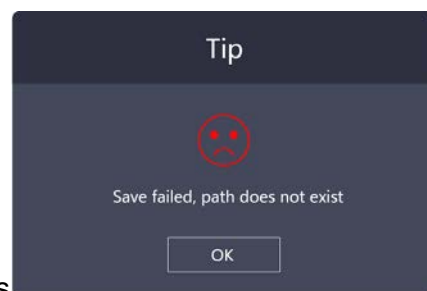

4 locations

4If location is selected, touch it to confirm and the pop-up window is shown as below when the saving is succeeded:

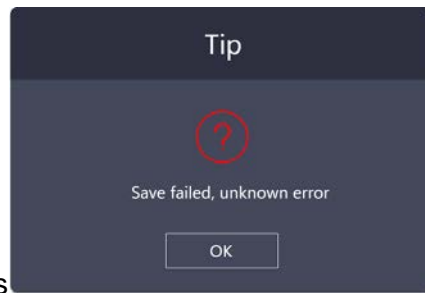

When the pop-up window is displayed as , it means the storage is lacked.

When the pop-up window is displayed as , it means the path is not existed (it could be caused by pulling out the external device during

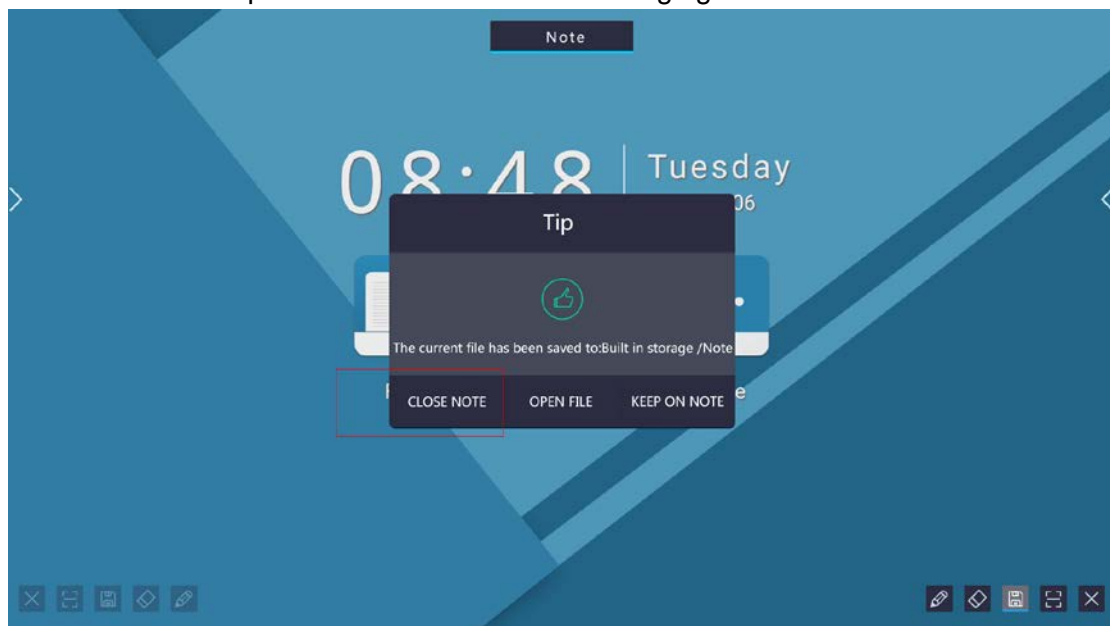

storage).

When the pop-up window is displayed as , it means unknown errors that can't be validated.

Touch "Understand"  button to retract the pop-up window. When the saving is succeeded, the tip pop-up window is show as below. Touch "Close

Annotation"  button to quit annotation and return to the application before the annotation is opened. As shown in the following figure:

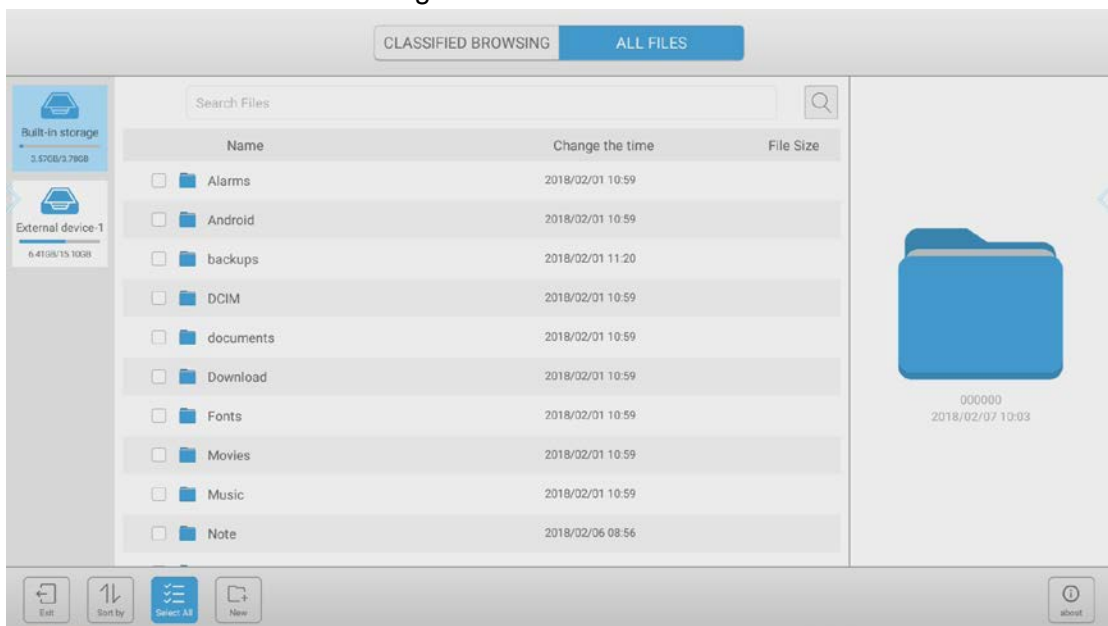

Touch the "view file"  button on the tip pop-up window, close annotation to view screenshot and you can choose it by thumbnail, which is shown as follow.

Touch “Keep on Annotation” button to close pup-up window and remain in annotation interface for continuous annotation.

5 Saving Location:

When you chose to save in the local, a screenshot is found in a file with the name of "Annotation" in the built-in storage.

When you chose to save in the external device, a file with the name of “annotation” can be found in the root directory of the external device, which is shown as follow:

6. Instructions for QR code:

Pop up QR code window: Touch the QR code icon in the annotation toolbar , and

the QR code pop-up window is shown as below:

2 Retract QR code window: a. Touch the QR code icon in the annotation toolbar ; b. Touch the area outside the QR code in the page.

3 Generation of QR code: Touch QR code sharing icon  to send request → show

4 The pop-up window would show  if the generation of QR code

is failed. Touch “Network Setting”  button to open network setting module from system setting.

5 Instructions for encryption of QR code:

a. The encryption of QR code: Touch the upper right corner encryption button of the

QR code window to generate random password, for example:

Note: The encryption can not be canceled after the two-dimensional code is encrypted, but it can be re generated.

6Instructions for enlarging QR code:

a. Enlarge: Touch the Enlarge Icon in the QR code window and the enlarged window is shown as below:

b. Retract: Touch any area outside the QR code in the page.

3.1.4 Notification Panel

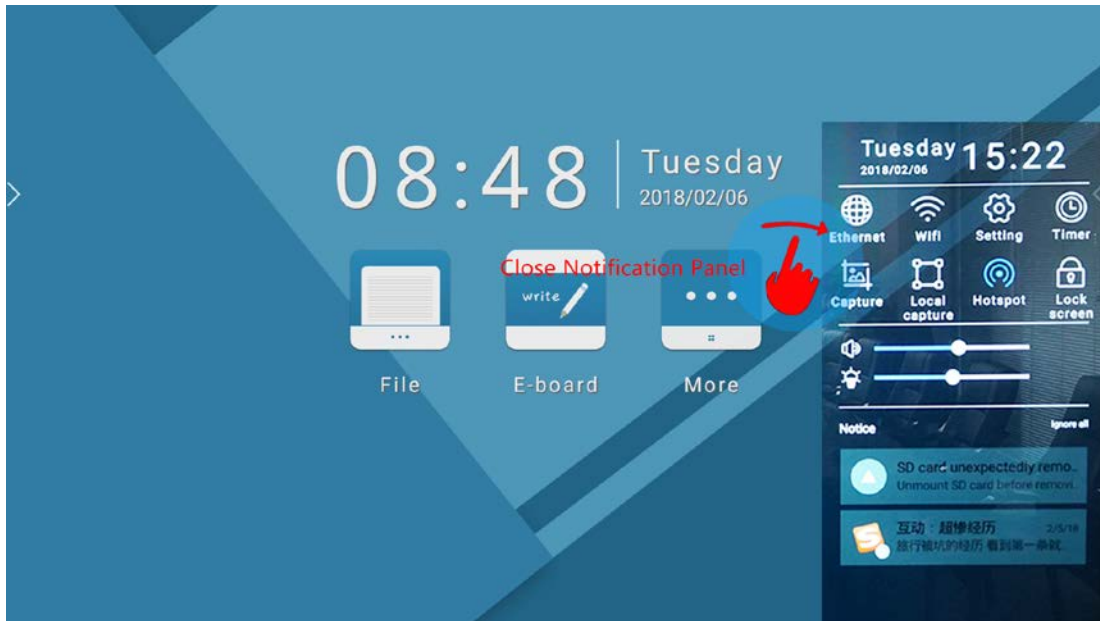

1. Call out notification panel:

- ① Touch the  in navigation bar (Menu Icon);
- ② Slide the page inward from the left and right side edge of the page [except the area of the navigation hint icon];

2. Retract notification panel:

- ① Slide the page outward to page side;

③ Touch the icons in notification panel, including: wired network , wireless , setting , timer , screenshot , local screenshot , hot spot , lock screen ;

3. Only one side of left and right notification panel can be opened at a time, and one side will be retracted when the other side is unfolded.

4. Instructions for touch operation of notification panel button:

Wired network: Touch  to open wired network;

Wireless: Touch  to open wireless network;

Close the network: Touch the  or  again;

Setting: Touch  to enter into System Setting APP , and the notification panel will be retracted with the interface shown below:

Timer: Touch  to open timer, and the notification panel is retracted;

A. Switch expansion state to suspension state: It will be automatically retracted and suspended after 5 seconds in timer state, and the suspension is shown as

B. Switch suspension state to expansion state: Touch any area of timer window;

C. Move timer window: Touch the no-number area of the timer window and move it in the page.

Note: When you touch the  in the left notification panel to call out timer, it will appear in the left side of the page; when you touch the  in the right notification panel to call out timer, it will appear in the right side of the page.

Timing setting: For clockwise timing , you can touch  to timing state

, which can count to 23: 59: 59; you need set time first for countdown

, then touch  to timing state

, of which the maximum

countdown is 23: 59: 59, and the clockwise timing will be automatically stopped when

it reaches 23: 59: 59, and you can touch  for countdown from 23: 59: 59;

Set down alarm: Only countdown  can be used to set down alarm. When

the countdown is set down, the upper right Alarm Clock ICON will be changed from

to

, which means the alarm clock is ready, and you can touch

alarm clock to remind user when countdown ends. You can touch

again to cancel the alarm clock; the alarm is only valid for one time. If you want to reset the alarm, you need to touch it again;

Reset setting: The rest button  is used to clear recorded time, which can't be

realized when the alarm has no record , and it can only be used when there

is a time record ; touch  during clockwise timing state to stop timing,

and the recorded time will be cleared, showing 00: 00: 00; touch  during countdown state to stop the timing, and the recorded time will go back to the set state at the beginning. For example: Set 2-minute countdown (00: 02: 00) first, then touch  when the countdown has 1 minute left (00: 01: 00), and the time will be reset to 00: 02: 00;

Stop timing: Touching  during timing can stop it; If the current timer window is in

a state of suspension , you need to touch the area of the timer

window and switch the suspension state to the normal display window ,

then touch  to stop timing; If the current timer window is in full screen

state , you need to touch the screen to switch the full screen state

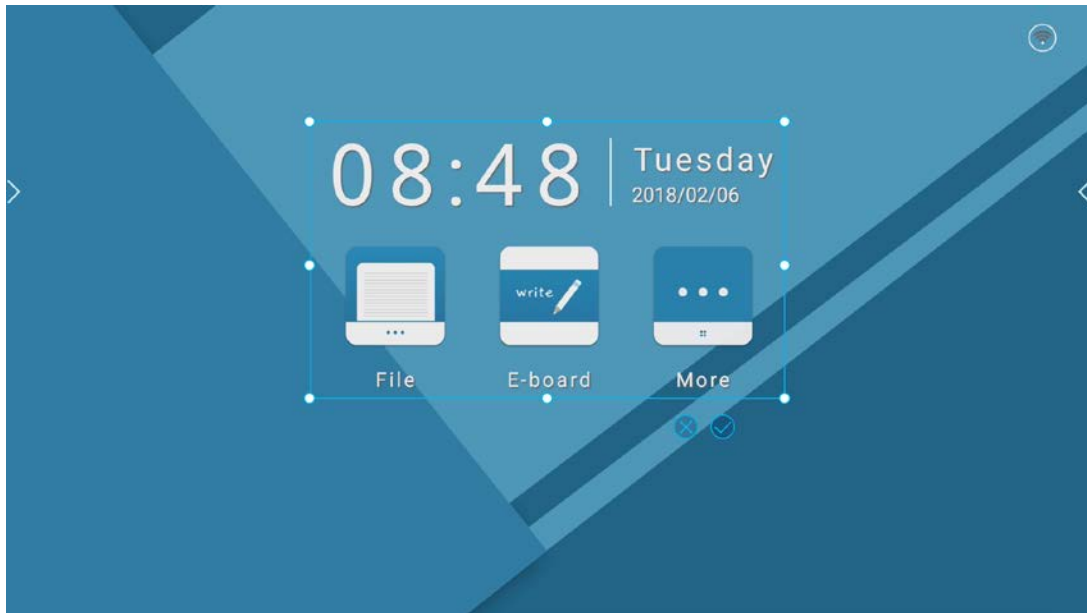

to the normal display window , and then touch  to stop timing;

Close timer: Touch  to close timer and clear data, which means every time you open the timer, it will display 00: 00: 00.

Screenshot: Touch  to save the whole screenshot into the local file "screenshot", and notification panel is retracted.

Local screenshot:

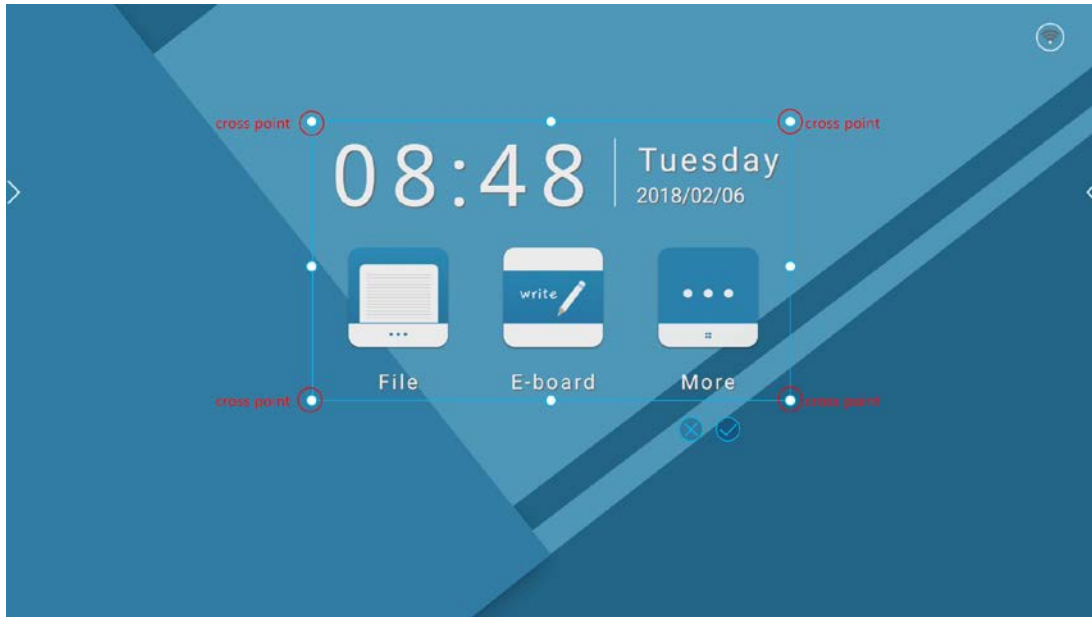

Touch  (Local Screenshot Icon) to retract notification panel and pop up screenshot window, which lets user to adjust screenshot area by pulling the edit point on the border, making the screen area change with gestures;

Touch the middle point for unidirectional enlargement / reduction of screen shot area.

Touching cross point can change the length and width of screen area in two direction. When you touch the cross point and move along the diagonal direction, the screen area can be enlarged and reduced proportionally;

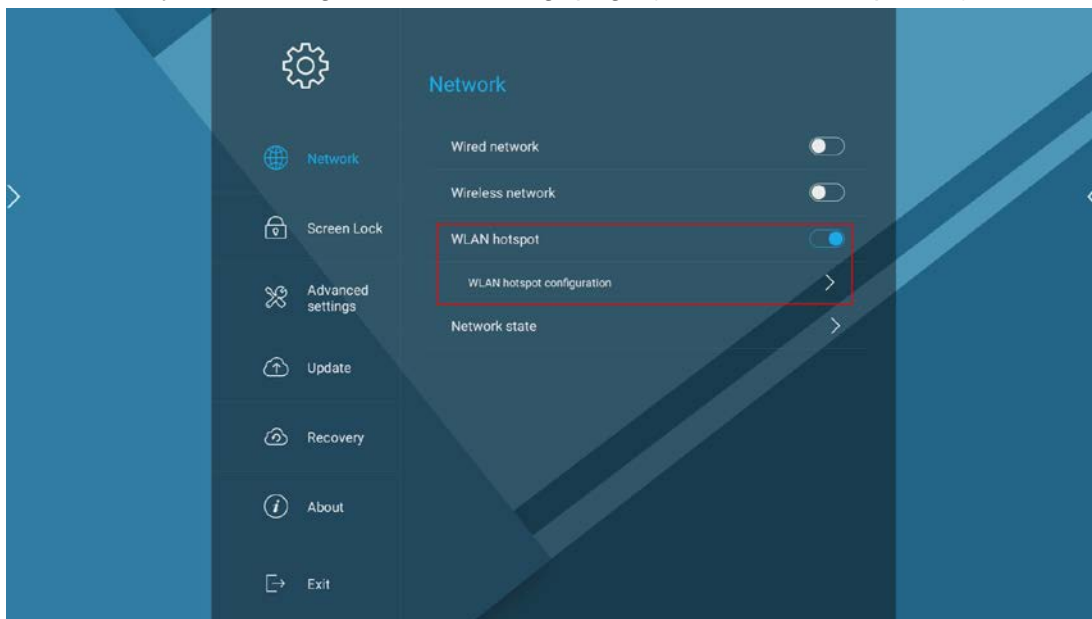

Instructions for screenshot window button touch operation:
